

OpenFXT Image Generator Service API v2.0

Documentation

1. Introduction.

Welcome to the OpenFXT Image Generator API binding guide, the purpose of this document is to provide an overview of how developers can access and use the OpenFXT Image Generator API to submit to a request and receive a generated image url as described in the submitted request using Google's advanced AI model Gemini.

2. Overview.

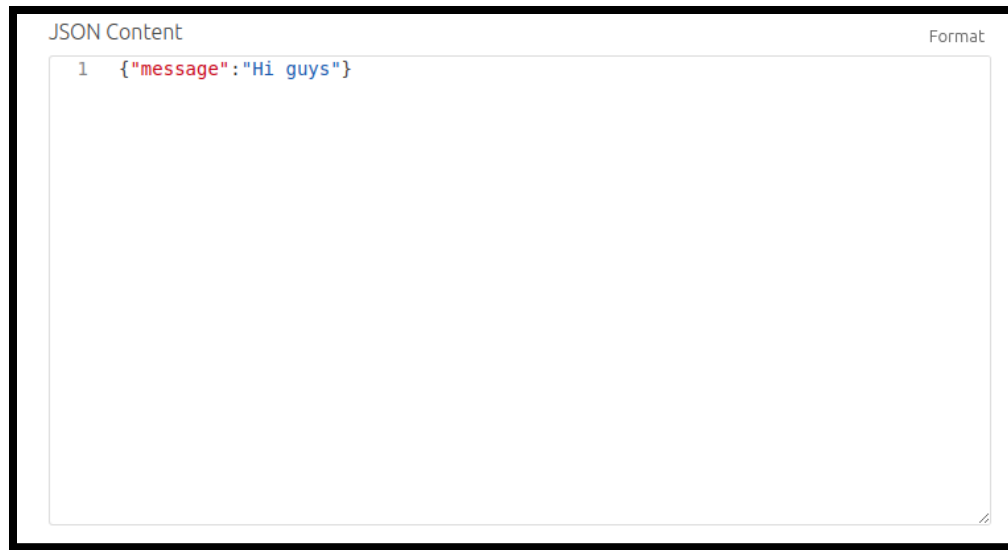

- ❖ Base URL: <https://chatfxt.pythonanywhere.com/api/v2/>
- ❖ Version: 2.0
- ❖ Feature: Based on the data describing the image to be created, it is sent to the server, creates the image and sends a url leading to the image back to the client if the request is successful.

3. Authentication.

The API provided by OpenFXT is completely free and does not require any authentication method to use, developers can freely use it without worrying about limits or usage costs.

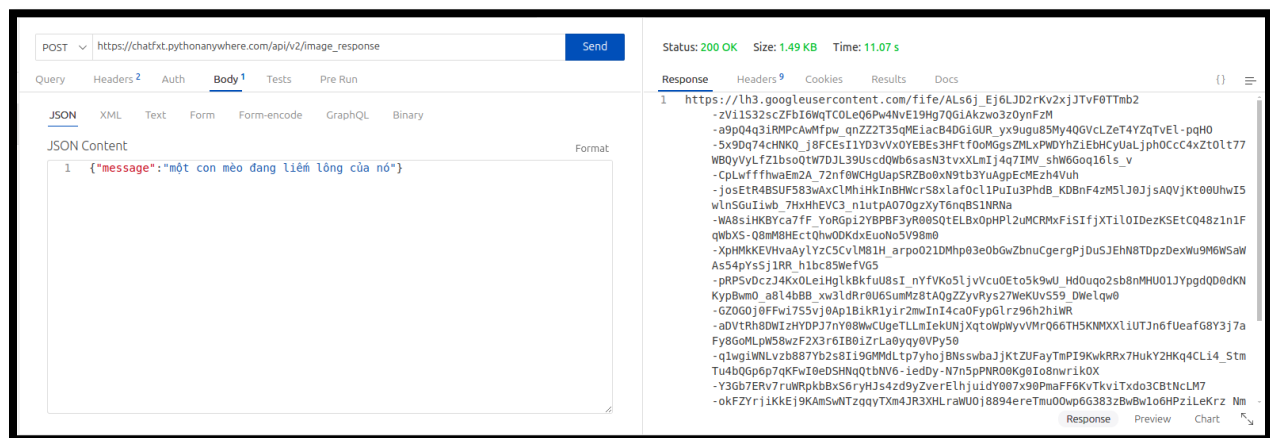

4. Endpoint.

- ❖ **POST /image_response**
- ❖ **Description:** Based on the data describing the image to be created, it is sent to the server, creates the image and sends a url leading to the image back to the client if the request is successful.
- ❖ **Parameters:**

❖ **Response:** The simple response will return a text string for url image created.

5. Example.
